KL6000 Model

TRACKLESS

When comes the time to choose a snow plow for your Trackless, choose the **KL6000** from **CÔTÉ**. Its unique and extra-rugged construction will greatly facilitate your sidewalk clearing operations, like no other competing model can.

The **KL6000** has been designed from the original vehicle chassis. You can rest assured that it will adapt perfectly to it.

The **KL6000** is clearly the better choice. No other snow plow in this category is as rugged. Thanks to its unique blade tipping system, a **CÔTÉ** exclusive, you could accidentally hit an obstacle as high as 5 inches (13 cm) with no impact on your security. The snow plow attaches to the lowest possible point of the vehicle, and that increases the stability and traction and reduces the turning radius.
